Brachot Family Member  
**BELTRAMI NATURAL STONE TILES**  
**RETAIL PRICE LIST**  
**1st MAY 2021**

## PRICING

All products are priced in 3 bands. The retail price applies to orders of 0-10m<sup>2</sup>. Quantity discounts are applied as follows:

- 10% off orders > 10m<sup>2</sup>
- 20% off orders > 100m<sup>2</sup>
- For orders > 150m<sup>2</sup> - POA - please ask for a quotation

## KERBSIDE DELIVERY BY PALLET COURIER

**Delivery to most of mainland UK:** £72 inc VAT per pallet (max 1,000kg per pallet - some orders will incur multiple charges)  
**Additional small order packing charge:** £24 inc VAT (for orders of less than 10m<sup>2</sup>)

## AVAILABILITY / LEAD TIMES

No tile stock is held in the UK. For products available from stock in Belgium, delivery can normally be made to a customer in the UK within 4 weeks.

## PLEASE NOTE - FOR ALL NATURAL STONES:

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

## GLOSSARY - FINISHES

<b>Antico</b>	Tiles are turned around in a tumbling machine filled with ceramic pebbles. This gives the appearance of old tiles worn by time with a natural patina.
<b>Anzano (Satino)</b>	Tiles are first hand honed and flamed, then brushed. This semi-rough finish is relatively antislip, with easy maintenance and less sensitivity to scratches.
<b>Aquaflamed</b>	The tile is first treated with water at high pressure (hydrojet) and the brushed, to accentuate the intense natural colour of the stone.
<b>Arenado</b>	Gives the surface a rough, finely grained look and feel.
<b>Bouchardino</b>	The surface of the stone is bush hammered then brushed, to give the stone a relatively smooth textured surface.
<b>Brossato</b>	Tiles have the diamond cut surface made smoother with the aid of brushes under high pressure. This light textured finish is relatively anti-slip.
<b>Brosso Vecchio</b>	Unusual, matt finish for marbles with a unique 'leather touch' feel.
<b>Bush Hammered</b>	Working the surface with a pointed hammer creates uneven irregularities in the structure of the tile. Feels rather rough, with an anti-slip effect.
<b>Cleft</b>	The robust, cleft surface has large splinters and hollows in all shapes and sizes. Ideally suited to street paving, driveways and façade cladding.
<b>Dark Hand Honed</b>	Scraping the surface lends the natural stone a deep, dark tint. Light colour nuances give the tile a warm, contemporary appearance.
<b>Diamond Cut (Sawn)</b>	Pure, untreated finish after the stone block has been sawn. Parallel grooves or circular marks may be seen. Mainly used for outdoor applications.
<b>Diamond Scoured</b>	Scouring removes irregularities in height or unevenness on the surface. The scouring material is made of grains of industrial diamond.
<b>Enoluce</b>	The first matte and dark finish in blue stone that can be used outside, to bring out the striking mineral complexity of Belgian blue limestone.
<b>Enopure</b>	Contemporary Belgian blue flagstones, nuanced light grey with blue lines. Smooth texture with saw marks which will soften over time.
<b>Enoskin</b>	A beautiful, light, homogeneous grey which is slightly grainy but with a soft and structured appearance with anti-slip properties.
<b>Enostyl Light</b>	Grey tiles with an aged patina, worn edges and corners slightly broken. A reminder of flagstones in old castles and churches.
<b>Flamed</b>	The surface is brought into contact with flames then immediately cooled with water. The temperature shock gives the stone a fractured, non-slip texture.
<b>Flamewashed</b>	A rather solid finish, which highlights the intense, natural colours of the natural stone.
<b>Hand Honed</b>	Scouring the natural stone considerably reduces the traces of sawing. The result is an even surface. Suitable for outdoor applications.
<b>Henegouwen Antic</b>	Old fashioned and warm flagstones with a worn and trammelled appearance, slightly irregular texture and slightly broken corners.
<b>Heritage</b>	Tiles are half hand honed, so that some roughness is retained, then brushed. This aged effect gives the flooring a used look and breathes authenticity
<b>Honed</b>	Surfaces are fine rubbed using different grades of abrasives under factory conditions. The surface is smooth and matt without visible grooves.
<b>Klinkstone</b>	Warm and old-fashioned with a slightly irregular texture and slightly broken corners, a reminder of old castles and abbeys.
<b>Letano (Skintouch)</b>	Tiles are brushed under factory conditions, to give the surface a light textured feel like leather
<b>Natural Cleft (Riven)</b>	A finish achieved when layered stones (usually slate or sandstone) are split, or cleft, leaving a naturally rough surface which is uneven and varied.
<b>Polished</b>	Machined with fine abrasives to give a reflective surface showing strong colours. The degree of polishing is determined by the mineral elements in the stone.
<b>Sabantico</b>	A colourful mixture of finishes of Muschelkalk. It lends the tile an authentic feel with small irregularities on the surface. Pleasant to touch.
<b>Sabbiatino</b>	The surface is worked with a very fine bush hammer, then brushed, to give the stone a relatively smooth textured surface.
<b>Sensato</b>	Fine structure obtained by mechanical treatment. The smooth structure makes it pleasant to the touch.
<b>Stonewashed</b>	The stone is treated in a bath of ceramic chips. The scouring effect rounds off the sharp edges and gives the surface a rich patina.
<b>Tumbled</b>	The serrated edges of the tile bring out the aged character that this surface treatment aims to achieve.
<b>Versailles</b>	The surfaces of the tiles are hand honed and brushed, then the edges are milled to give a rustic appearance.
<b>Vieux Castel</b>	The serrated edges and unusual surface process lend the tile a worn effect with an authentic character.
<b>Vieux Manoir</b>	The surface of the tile is rustically distressed by a combination of hand honing, milling and brushing. The edges are highly distressed.

PLEASE NOTE - FOR ALL NATURAL STONES:

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

GLOSSARY - PRODUCT FORMATS

3D Strips	(Formerly Beltralinea 3D) Strips supplied in 3 widths (5cm/7cm/14cm) and 3 thicknesses (1cm/1.5cm/2cm) to allow a multi-depth pattern.
Barrettes	Rough pieces of riven or tumbled slate, which can be stacked to form wall cladding with the look of dry stone walling.
Calibrated Tiles	(Formerly Beltralinea) Thin stone tiles which are lighter, therefore easier to transport and lay. This also allows large format tiles to be fitted on the wall.
Cladding - B-Rocks	(Formerly Rockpanels) Rough pieces of natural stone bonded to a concrete panel to give any wall or façade the look of stacked stones.
Cladding - Minipanel	Thin strips of natural cleft stone (1.2cm to 2cm thick) are bonded together into single units for wall cladding.
Cladding - Stonepanels	Pieces of natural cleft stone (1.2cm to 2cm thick) are bonded together into single units for wall cladding.
Cladding - Stoneskin	Pieces of rough stone (1.5cm to 3cm thick) are bonded together into single units for wall cladding.
French Pattern	(Roman Pavement) Tiles are supplied in a set pattern (available on request). Orders must be placed in complete modules.
Jumbo Pattern	(Big Roman Pavement) Tiles are supplied in a set pattern (available on request). Orders must be placed in complete modules.
Kerbs	For exterior finishing - in some materials these are finished on all sides.
Large Treads	(Block Steps) 15cm thick pieces of stone available in 100 cm and 150 cm widths, used for exterior finishing.
Mosaics	Small pieces of 1cm thick stone glued onto a mesh backing. Up to 10 patterns are available, suitable for both classic and contemporary settings.
Opus Incertum	Crazy paving - a traditional way of arranging stones to create an artistic, original effect.
Palisades	Vertical stones in varying heights, used to create an exterior barrier or enclosure.
Pavers	Thick paving stones with a distressed or worn look, ideal for creating natural looking patios, paths or driveways.
Paving Stones (Setts)	Small square or rectangular quarried stones, formerly used for paving roads, now used as decorative stones in landscape architecture.
Pool Copings	Can be used to integrate a swimming pool into surrounding tiles. Available in 4 types.
Random Lengths	Tiles are supplied in a fixed width but in random lengths. The lengths generally fall within a range of 40cm to 80cm, but this can vary for different products.
Skirting	Most floor tiles can be supplied with 7cm high skirting in the same material, for a perfect finish. The top edge is finished.
Strips	(Formerly Beltralinea) Calibrated stone strips for wall cladding. Available in widths of 5cm, 7cm and 14cm, can be fitted in a number of ways.
Tiles	Standard (non-calibrated) tiles. Most tiles have straight sawn edges unless specified otherwise, or unless supplied in an aged finish (e.g. Antico).
Treads & Risers	For finishing exterior steps. The treads are supplied with one long edge finished.
Wall Tiles	1cm thick tiles with bevelled edges, specially designed for fixing to walls in kitchens or bathrooms.

Material name:

Stone type:

Country of origin:

Wear resistance:

Typical appearance:

ARDESIA NERA (!!)\*

Slate

China

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Basic grey-black colour with a naturally rough, but relatively smooth riven surface.

Special notes:

The presence of iron in Ardesia Nera is an intrinsic characteristic of this material and may or may not appear later on. The presence of iron cannot be detected beforehand and can not be selected accordingly. Therefore the appearance of rust stains after installation can not be a reason for complaint.

Material name:

Pseudonyms:

Stone type:

Country of origin:

Wear resistance:

Typical appearance:

ASIAN BLUE (!!)\*

Vietnamese Bluestone, Pacific Blue

Limestone

Vietnam

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Sedimentary grey-blue limestone with black speckled background and white corals and shells here and there. Asian Blue is a good alternative to Belgian Bluestone. It is more uniform in colour and structure.

Special notes:

In outdoor applications, this natural stone gets a typical / characteristic lighter patina. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the mineralogical composition, this material is not resistant to acids.

Material name: BELGIAN BLUESTONE\*  
Pseudonyms: Belgian Fossil, Petit Granit  
Stone type: Limestone  
Country of origin: Belgium  
Wear resistance: ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended  
Typical appearance: A famous hard limestone with a grey-blue background and scattered white fossils and shells.

Special notes: This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Used in outdoor applications, this natural stone gets a typical / characteristic light patina. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone.

**PLEASE NOTE - FOR ALL NATURAL STONES:**

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

**PLEASE NOTE - FOR ALL NATURAL STONES:**

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

**Material name:** BIANCO CARRARA

**Stone type:** Marble

**Country of origin:** Italy

**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

**Typical appearance:** Marble with a substantial white background and a subtle light to dark gray veining.

**Special notes:** This material is moisture sensitive. This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. The polished finish is preferably used as a wall covering, as a floor finish only to be used in areas with limited wear resistance requirements, eg bathroom. Very small holes may appear on the surface due to the geological formation of this marble. They are part of the material. Due to the mineralogical composition, this material is not resistant to acids. Concentrations of minerals and / or veins may appear. These were created during the formation of the stone and are not technical defects. They are therefore part of the material.

Material name:

BIANCO ROYAL

Stone type:

Marble

Country of origin:

Turkey

Wear resistance:

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Typical appearance:

Marble with a white to light grey background in which faded light yellow to pink to gray veins are visible.

Special notes:

This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others. In case of excessive contact with water, this material will discolor and / or peel off locally. Due to the mineralogical composition, this material is not resistant to acids. Small holes and / or microcracks can sometimes appear in this natural stone.

**Stone type:** Slate  
**Country of origin:** Brazil  
**Wear resistance:** ⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended  
**Typical appearance:** Slate with a basic grey-black colour with a natural, but relatively smooth riven surface.

**Special notes:** This natural stone is a layered rock, which causes serrated edges. After installation, chips can appear on the upper surface which loose after cleaning several times. Once on the hard core of the material, this phenomenon stops. This can lead to pieces with a different color / shade. This material is very resistant to wear, but not to scratches. However, superficial scratches will patinate quickly with time and maintenance.

PLEASE NOTE - FOR ALL NATURAL STONES:

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

Material name:

BLUESTONE ❄

Stone type:

Limestone

Country of origin:

China

Wear resistance:

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Typical appearance:

Blue-grey base colour in which round/irregular sedimentary particles are visible. The surface has a speckled structure.

Special notes:

The stone contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone.

<b>Material name:</b>		<b>BOIS DORE</b>								
<b>Pseudonyms:</b>		Boisvillon, Pierre de Nod								
<b>Stone type:</b>		Limestone								
<b>Country of origin:</b>		France								
<b>Wear resistance:</b>		③ Medium - suitable for domestic homes - sealing recommended								
<b>Typical appearance:</b>		Limestone with a cream-brown background with reddish/brown flame pattern.								

**Special notes:** Due to the mineralogical composition, this material is not resistant to acids. This material can not be polished because of its geological composition. Other finishes are possible, the surface then gets a different structure, design or color. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs.

<b>Material name:</b>		<b>BRECCIA VERDE</b> ❄								
<b>Stone type:</b>		Breccia								
<b>Country of origin:</b>		China								
<b>Wear resistance:</b>		④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended								
<b>Typical appearance:</b>		Natural breccia characterised by irregular stone fragments with a green to blue-grey / black color in a green-grey matrix.								

**Special notes:** This material is composed of a variation of rock fragments with possible various characteristics, such as hardness or resistance to acids. Concentrations of minerals and / or veins may appear. These were created during the formation of the stone and are not technical defects. They are therefore part of the material. Small holes and / or microcracks can sometimes appear in this natural stone.

**Material name:** COLONIAL WHITE

**Stone type:** Granite

**Country of origin:** India

**Wear resistance:** ⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended

**Typical appearance:** White, moderately coarse-grained granite with larger burgundy minerals (garnet) and scattered darker veins.

**Special notes:** At the site of darker mineral concentrations, the surface may appear slightly duller in backlighting. It should be considered that the arrangement of certain minerals creates a focus on the slabs and tiles. A "turned" plate is particularly disturbing on larger surfaces. This must be taken into account when installing. Small holes and / or microcracks can sometimes appear in this natural stone. In case of excessive contact with water, this material will discolor and / or peel off locally. The presence of iron is more or less important in this stone. It is an intrinsic characteristic of the material. This presence can not be detected in advance and can not be deliberately avoided.

Material name:

CREMA MARFIL (!!)

Stone type:

Marble

Country of origin:

Spain

Wear resistance:

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Typical appearance:

Compact natural stone with a homogeneous colour and shades that vary from white to beige. The stone contains calcite veins, cracks and orange-red coloured stylistic veins but no pores. In general, the open structures are cemented.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. The polished finish is preferably used as a wall covering, as a floor finish only to be used in areas with limited wear resistance requirements, e.g. bathroom. The stone contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the mineralogical composition, this material is not resistant to acids. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others.

PLEASE NOTE - FOR ALL NATURAL STONES:

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

**Material name:** DONATELLO

**Stone type:** Marble

**Country of origin:** Brazil

**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

**Typical appearance:** Dolomite marble with a light to dark grey colour in which wavy white and dark mineral concentrations and veins occur.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others. Due to the mineralogical composition, this material is not resistant to acids.

Material name: EMPERADOR DARK

Pseudonyms: Marron Emperador

Stone type: Marble

Country of origin: Spain

Wear resistance: ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Typical appearance: Marble with a dark brown background with scattered narrow and wide, white beige veins ("breccia-like" structure).

Special notes: This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. The polished finish is preferably used as a wall covering, as a floor finish only to be used in areas with limited wear resistance requirements, eg bathroom. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others. Small holes and / or microcracks can sometimes appear in this natural stone.

Special notes:

INDIAN WHITE

Granite

India

⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended

White to light grey fine-grained granite with fine dark and pink veins that ensure a certain orientation.

*It should be considered that the arrangement of certain minerals creates a focus on the slabs and tiles. A "turned" plate is particularly disturbing on larger surfaces. This must be taken into account when installing. Small holes and / or microcracks can sometimes appear in this natural stone. In case of excessive contact with water, this material will discolor and / or peel off locally. The presence of iron is more or less important in this stone. It is an intrinsic characteristic of the material. This presence can not be detected in advance and can not be deliberately avoided.*

Special notes:

JININ STONE (!!)

Limestone

China

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Oolitic dolomite rich limestone. The background colour is dark blue-grey.

*In outdoor applications, this natural stone gets a typical / characteristic lighter patina. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the presence of dolomite, the stone will show a slight brown color after some time outdoors. Due to the mineralogical composition, this material is not resistant to acids.*

Material name:

Stone type:

Country of origin:

Wear resistance:

Typical appearance:

Special notes:

JURA BEIGE

Limestone

Germany

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Sedimentary, fine-grained limestone: ochre-beige with natural glass or quartz veins and sometimes many fossils.

*This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. The stone contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. In case of excessive contact with water, this material will discolor and / or peel off locally. Due to the mineralogical composition, this material is not resistant to acids. The presence of iron is more or less important in this stone. It is an intrinsic characteristic of the material. This presence can not be detected in advance and can not be deliberately avoided.*

**Material name:** LANVIGNES  
**Stone type:** Limestone  
**Country of origin:** France  
**Wear resistance:** ③ Medium - suitable for domestic homes - sealing recommended  
**Typical appearance:** Beige with a "flamed-mottled" appearance with dark speckles and shells. Sporadically larger fossil fragments occur.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Due to the mineralogical composition, this material is not resistant to acids. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs.

**Material name:** MIRABELLE (!)  
**Pseudonyms:** Mirabelle Mocca Crème (cross cut), Mocca A Passe Extra  
**Stone type:** Limestone  
**Country of origin:** Portugal  
**Wear resistance:** ③ Medium - suitable for domestic homes - sealing recommended  
**Typical appearance:** Limestone from Portugal with a light beige, cloudy pattern and a light grey speck; typical layered structure.

**Special notes:** *The stone contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the mineralogical composition, this material is not resistant to acids. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs.*

PLEASE NOTE - FOR ALL NATURAL STONES:

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

**Material name:** MONTAUK (!!)\*

**Pseudonyms:** Montauk Green, Brazilian Green, Cinza

**Stone type:** Slate

**Country of origin:** Brazil

**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

**Typical appearance:** Brazilian slate with a grey-green base colour and a naturally rough, but relatively solid, surface.

**Special notes:** After installation, chips can appear on the upper surface which loose after cleaning several times. Once on the hard core of the material, this phenomenon stops. This can lead to pieces with a different color / shade. This natural stone is a layered rock, which causes serrated edges. This material is very resistant to wear, but not to scratches. However, superficial scratches will patinate quickly with time and maintenance.

**Material name:** MUSCHELKALK \*

**Stone type:** Limestone

**Country of origin:** Germany

**Wear resistance:** ③ Medium - suitable for domestic and light commercial use - sealing recommended.

**Typical appearance:** Grey-brown fossiliferous limestone with multicolored shades.

**Special notes:** This stone can be used as in shower areas, but is more susceptible to staining and discolouring in these applications. In outdoor applications, this natural stone gets a typical / characteristic lighter patina. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Material name: NARI BLACK ❄️  
Stone type: Granite  
Country of origin: South Africa  
Wear resistance: ⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended  
Typical appearance: Dark grey to black coarse-grained granite with a homogeneous structure.

**Special notes:** This natural stone shows a different refraction of light on certain (twisted) groups of crystals when backlight. This gives the impression of spots. These are inherent to the material.

Material name: NERO MARQUINA (!!)  
Stone type: Marble  
Country of origin: Spain  
Wear resistance: ③ Medium - suitable for domestic and light commercial use - sealing recommended.  
Typical appearance: Classic Spanish marble with black background and a scattered white veining.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. The polished finish is preferably used as a wall covering, as a floor finish only to be used in areas with limited wear resistance requirements, eg bathroom. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the mineralogical composition, this material is not resistant to acids. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others.

**Material name:** NOIR D'ORIENT (!!)

**Pseudonyms:** Andhra Black, Cuddapah Black, Harappa Black

**Stone type:** Limestone

**Country of origin:** India

**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

**Typical appearance:** Very fine-grained sedimentary limestone (with dolomite) with a grey-black colour.

*Special notes: In outdoor applications, this natural stone gets a typical / characteristic lighter patina. This natural stone is a layered rock, which causes serrated edges. This material is very resistant to wear, but not to scratches. However, superficial scratches will patinate quickly with time and maintenance. Due to the mineralogical composition, this material is not resistant to acids.*

**Material name:** OYSTER (!!)\*

**Stone type:** Slate

**Country of origin:** China

**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

**Typical appearance:** Multicolored natural stone (white, yellow, brown) with a natural rough surface.

*Special notes: This natural stone is a layered rock, which causes serrated edges. The presence of iron is more or less important in this stone. It is an intrinsic characteristic of the material. This presence can not be detected in advance and can not be deliberately avoided. After installation, chips can appear on the upper surface which loose after cleaning several times. Once on the hard core of the material, this phenomenon stops. This can lead to pieces with a different color / shade.*

Material name:

Pseudonyms:

Stone type:

Country of origin:

Wear resistance:

Typical appearance:

PERLATO OLYMPO (!!)

Breccia Sarda, Daino Reale, Perlato Imperiale, Perlato Tirreno

Limestone

Italy

⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended

Light cream-coloured to brown background with occasional (sometimes very broad) veins that evolve from beige to brown.

*Special notes: This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others. Due to the mineralogical composition, this material is not resistant to acids. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone.*

PIERRE CHATEAU BEIGE

Limestone

Belgium

③ Medium - suitable for domestic and light commercial use - sealing recommended.

A collection of different limestones with white, beige and yellow tones.

*Special notes: The stone contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the mineralogical composition, this material is not resistant to acids. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs.*

**Material name:** ROSSO LEPANTO  
**Stone type:** Marble  
**Country of origin:** Turkey  
**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended  
**Typical appearance:** Turkish marble with a burgundy to purple background and scattered white veins.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. Small holes and / or microcracks can sometimes appear in this natural stone. This natural stone is often stuck to a net on the back side. This protects it from breakage resulting from transport and further processing or others. Due to the mineralogical composition, this material is not resistant to acids. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone.

**Material name:** SAN PIETRO ✱  
**Stone type:** Travertine  
**Country of origin:** Italy  
**Wear resistance:** ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended  
**Typical appearance:** Italian travertine with a grey-beige background where natural holes give a unique texture to the surface.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs. Due to the mineralogical composition, this material is not resistant to acids. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation.

PLEASE NOTE - FOR ALL NATURAL STONES:

- Varying shades of color and/or granulometry may be present between the different batches and even within the same batch.
- Veins and/or fossils may appear due to geological formation. These are not technical defects, they are part of the material.
- Please read the special notes for each material. Full technical data sheets (including installation guidelines) are available on request.

Material name:	SHIVAKASI
Pseudonyms:	Ivory Brown
Stone type:	Granite
Country of origin:	India
Wear resistance:	⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended
Typical appearance:	Yellow-beige-pink color with a varied structure: veins and burgundy/rust-colored mineral concentrations.

**Special notes:** At the site of darker mineral concentrations, the surface may appear slightly duller in backlighting. It should be considered that the arrangement of certain minerals creates a focus on the slabs and tiles. A "turned" plate is particularly disturbing on larger surfaces. This must be taken into account when installing. Small holes and / or microcracks can sometimes appear in this natural stone. In case of excessive contact with water, this material will discolor and / or peel off locally. The presence of iron is more or less important in this stone. It is an intrinsic characteristic of the material. This presence can not be detected in advance and can not be deliberately avoided.

Material name:	SIMYRA (!!) ❄
Pseudonyms:	Desert Ochre, Perlantino, Simaray, Symira
Stone type:	Limestone
Country of origin:	Lebanon
Wear resistance:	④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended
Typical appearance:	Hard beige limestone from the Middle East that is suitable for kitchens, bathrooms and terraces.

**Special notes:** This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. The polished finish is preferably used as a wall covering, as a floor finish only to be used in areas with limited wear resistance requirements, eg bathroom. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs. The stone also contains stylolites veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone. Due to the mineralogical composition, this material is not resistant to acids.

**Material name:** STEEL GREY ✱  
**Stone type:** Granite  
**Country of origin:** India  
**Wear resistance:** ⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended  
**Typical appearance:** Dark grey granite with larger dark grey to black minerals spread over the surface.  
**Special notes:** At the site of darker mineral concentrations, the surface may appear slightly duller in backlighting. It should be considered that the arrangement of certain minerals creates a focus on the slabs and tiles. A "turned" plate is particularly disturbing on larger surfaces. This must be taken into account when installing. This natural stone shows a different refraction of light on certain (twisted) groups of crystals when backlight. This gives the impression of spots. These are inherent to the material. Small holes and / or microcracks can sometimes appear in this natural stone.

TRAVERTINE CLASSIC BEIGE ❄

Tuscany, Cross-Cut Travertine

Travertine

Turkey

④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended

Travertine with a cream-colored background with yellow to light brown clouds.

Special notes: Antico = unfilled. Honed = filled. Some open pores and veins can be filled / masticated in production. Thin open veins and spots may appear after installation. Small holes may appear on the surface of this natural stone. This is an intrinsic characteristic of the material which can therefore not be subject to claims. These holes may be clogged during the re-grouting of the slabs. Due to the mineralogical composition, this material is not resistant to acids. Veins and / or fossils may appear due to geological formation. These are not technical defects and they are part of the material. For outdoor applications, no filled / masticated materials may be used.

Material name: VIEUX BLEU BELGE (!!)\*  
Stone type: Limestone  
Country of origin: Belgium  
Wear resistance: ④ Good - suitable for domestic homes and commercial buildings with moderate use - sealing recommended  
Typical appearance: Belgian Bluestone with a very aged appearance thanks to the Versailles finish on the surface and edges.

Special notes: This stone can be used in shower areas, but is more susceptible to staining and discolouring in these applications. Used in outdoor applications, this natural stone gets a typical / characteristic light patina. The stone also contains stylolitic veins that may emerge after some time. This phenomenon is part of the structure of the material and has no influence on the durability of the stone.

**Wear resistance:**  
**Typical appearance:**

**WISKONT WHITE**  
Viscount White  
Granite  
India  
⑤ High - suitable for domestic homes and commercial buildings with intensive use - sealing recommended  
White granite with medium grain size, veins and typically black bands/veins in a heterogeneous structure.

*Special notes: At the site of darker mineral concentrations, the surface may appear slightly duller in backlighting. It should be considered that the arrangement of certain minerals creates a focus on the slabs and tiles. A "turned" plate is particularly disturbing on larger surfaces. This must be taken into account when installing. Small holes and / or microcracks can sometimes appear in this natural stone.*
